Everyone knows that controlling fuel costs is a top priority for businesses of all sizes. Supervised Fuels has a proven track record of helping many business fleets throughout the country lower the total cost of keeping their vehicles fueled, and their employees on the job being productive for their business.

As a result of our partnership with HBPP, members are now able to participate in our cost plus purchasing program typically reserved for the largest businesses. The benefit to members is an overall reduced cost of fuel over time. In addition, we provide the highest controlled fueling system on the market.

Supervised Fuels Cost Plus Program

Helping Businesses Control Fuel Purchasing & Theft!

- ◆ Drivers can be restricted to purchase only specific grades of fuel appropriate for the vehicle they are driving.
- ◆ Drivers can be restricted to purchase only a fixed number of gallons per day, week, or month.
- ◆ Any time a driver pumps more than their typical fill amount, we can alert you!
- ◆ Drivers can be restricted to fuel only between certain times and days of the week when they are working, eliminating the possibility of after hours fueling where most slippage occurs.
- ◆ If no time and day restrictions are placed in effect, your drivers are allowed to purchase fuel anytime 7 days a week, 365 days a year. However, we will tell you when they fuel outside your normal hours of operation.
- ◆ While we can restrict your driver's ability to fuel only specific grades of fuel, sometimes you may find it necessary to allow certain drivers to fuel more than one grade of fuel. In such instances, we can tell you when this event occurs.
- ◆ One of the most important things a fleet should monitor is whether the driver is entering accurate odometer readings and whether the MPG achieved between fueling is reasonable. We can set your target MPG range by vehicle/driver, and report any time the calculated MPG falls outside that range.
